### AED MAINTENANCE

Regardless of the number of AEDs you manage, keeping your AED program up-to-date is critical. That's why South Jordan City has partnered with En-Pro to provide you with access, free of charge, to PlusTrac™, an easy-to-use but comprehensive software program for managing your AED program.

PlusTrac proactively monitors the overall compliance and readiness of every AED in your program. PlusTrac is designed exclusively to streamline your AED program management with many unique features that guarantee you are ready and compliant – today and beyond.

PlusTrac is a web-based interactive system that enables real-time reporting on the status of your AED program from any computer in your enterprise. From the Interactive Reporting Console, you can monitor and track routine maintenance inspections, electrode pad expiration, battery expiration and volunteer responder certification.

From the highest program level down to each AED, reporting features and escalating notification system keep you informed continuously, keeping you proactive instead of reactive. En-Pro's innovative approach uses the latest technology but keeps it simple for anyone to understand, use, and manage. This combination provides the most powerful application of its kind to manage the vital components of your AED program with point-and-click ease.

PlusTrac uses a system of checks and balances while monitoring all components that impact program compliance. PlusTrac will activate its escalating reporting system if necessary action is not taken at local AED program coordinator levels, informing all higher level program administrators.

#### **PlusTrac – Routine AED Maintenance.**

PlusTrac issues each AED site coordinator a unique username and password specific to the AEDs they are tasked to manage. AED site coordinators are required to physically review each AED at their location and then login to PlusTrac to report and archive their routine maintenance check. Requiring this level of interaction with an AED management application spurs and ensures program compliance by calling the AED site coordinators to action. PlusTrac requires interaction yet remains simple and easy to use. Just **three simple clicks** and an AED site coordinator can easily complete the required routine AED maintenance check.

PlusTrac ensures required AED maintenance is completed routinely through electronic reminders and the escalating reporting system. Each AED site coordinator will receive an electronic notification five days prior to the required maintenance date. If an AED Site coordinator does not complete the required maintenance, the escalating reporting system will send an electronic notification to the program administrator.

### **PlusTrac – Electrode Pad and Battery Tracking**

PlusTrac monitors and tracks the expiration dates of electrode pads and batteries for each AED device. Electronic notifications are sent 90, 60, and 30 days prior to expiration to each AED site coordinator. If an electrode pad or battery is within 30 days of its expiration date and the AED site coordinator has not acted, the escalating reporting system will send an electronic notification to the Corporate Program Administrator. This proactive notification system ensures that each AED is properly maintained and ready at all times.

### **PlusTrac – Volunteer Responder Tracking**

PlusTrac tracks all volunteer responder certifications by expiration. An electronic notification is sent 90, 60, and 30 days prior to certification expiration to each AED site coordinator. If a volunteer responder's certification is within 30 days of expiring and a recertification class has not been scheduled, the escalating reporting system will send an electronic notification to the corporate program administrator. This keeps all volunteer responders certified to use their AEDs when called to action.

En-Pro and South Jordan City understand the importance of keeping AED maintenance easy, while providing the power necessary to comprehensively manage your entire AED program. From a single AED unit all the way to the corporate program administrator, En-Pro has provided South Jordan with a solution that easily provides that power via the industry's leading AED management application, PlusTrac. Only PlusTrac empowers program administrators with one-click real time AED program status of volunteer responders are all managed through a simple and easy-to-use interface. With PlusTrac's checks and balances and the escalating reporting system, you are proactive – instead of reactive.
